Unternehmerisches Denken und sprachliche Vielfalt – eine Brücke in die Zukunft (2015- 2018)

Students from Rhaderfehn: Tomke, Fenja, Imke, Jeelka, Christoph and Janik  
Teachers: Ulrike Janssen and Katharina Killmann  
Europaschule Gymnasium Rhaderfehn,  
Rhaderfehn/ Germany

AUL 4: April, 24 – 28, 2017  
Augustenborg/Denmark

## Thursday, 27<sup>th</sup> April 2017

### Way to school:

At 7:15 in the morning we (Brandon, Razvan, Andrei and me) were picked up by the Danish teacher Hans with a rented minibus. Like every morning. Then we picked up some teachers and drove the way from Sonderborg to the school in Augustenborg. After round about 10 kilometers we arrived at school. Afterwards Hans drove back to Sonderborg to pick up the remaining teachers. That's also the reason why we were a little bit early at school.

### At school:

At 8:00 a.m. we met in the canteen. Then we walked to our classroom and started at 8:10 am with the work at our minimodels of our eco-amusement park, which we made a concept for a day ago. We had different materials like cardboard, wooden sticks, paint and hot glue.

We worked until 9:55. After we finished our work, had to present our models to a member of the administrative council of Sonderborg.

we

After the presentations we had a little break where we ate some bananas and apples.

AUL 4: April, 24 – 28, 2017  
Augustenborg/Denmark

At 10:10 a.m. we started a new project: Catapults. We worked in the workshop of the school with saws, drills and a lot of wood. While the six groups were working one member of every team went outside to find the counterweight: wet sand. We put it in some boxes and brought it to the workshop. After hard work we had lunch at 12:40. Just as every day we ate sandwiches, they were so delicious.

When everybody finished the meal we kept working. We got the work done at 14:30, after a lot of sawing, drilling and grinding. But it was still fun. From 14:30 to 15:00 we tested our trebuchets. We all learned that building a catapult isn't easy but fun. While we were testing the catapults the teachers cleaned up the workshop. When the tests ended the school program ended, too.

#### After school programme:

After the test shooting the day finished so we had a lot of free time on our own.

#### Afternoon and free time:

After Hans had taken us back to Sonderborg we went shopping and I bought a little gift for my family. After arriving home we had to prepare the ingredients for pizza, because we invited two host families for making and eating pizza. We just finished the preparations when the first guests arrived. While our pizza was baking the other guests arrived. But then we noticed that we had too less dough for so many people so my friend and I had to buy more. We had a quite funny evening because we played some games and talked until 22:30. It was very late because we had to travel home on the next day.
